

Integrates Cisco's Unified Contact Center Enterprise (CCE) with SAP CRM, enabling multichannel interaction handling within the SAP interface

Bucher + Suter's Connects for SAP® is a pre-packaged integration of SAP CRM and Cisco's Unified Contact Center Enterprise (CCE) solution. b+s Connects for SAP®'s seamless integration with the SAP CRM allows agents to login/logout, go ready/not ready with reason, answer, hang up, transfer, conference, click to dial etc. using the SAP Interaction Center WebClient (ICWC).

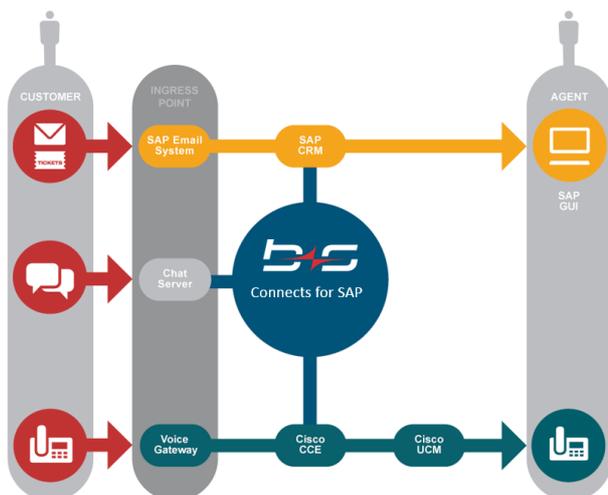

Placing interaction control inside of SAP where client data resides gives agents a 360 degree customer view. It streamlines contact handling, provides quick access to agent tools, improves efficiency and means that agents won't have to constantly tab back and forth between applications when searching for information. Tabbing between windows and applications takes time - time that customers spend waiting.

b+s Connects for SAP® provides full CTI functionality to help drive efficiency, cost reduction and customer satisfaction. The solution pops customer information into the agent's SAP graphical user interface (GUI) with a call, email or chat arrival, facilitating lookup of customer information by phone number, email address, Caller Entered Digits (CED) etc. Agents can manage multichannel interactions from within the SAP Interaction Center WebClient and the system logs all activities, both inbound and outbound for real time and historical re-orting.

When it comes time to choose an integration technology for the contact center, business leaders demand a solution that is feature rich, simple to use and cost effective. IT managers seek solutions that are easy to implement and simple to maintain. b+s Connects for SAP® is a pre-integrated package that is easy to install and offers the functionality demanded by today's contact centers.

Key Benefits

- **Pre-integrated** solution provides rapid and reliable deployment and lowers implementation costs.
- **Seamless integration** with the SAP Interaction Center allows agents to handle customer interaction (voice, email, tickets, chats) without needing to switch between applications. This streamlines agent workflow and reduces training.
- **Unified media handling and universal queue** enable centralized routing, reporting, scheduling etc. This improves productivity and simplifies administration.
- **Flexible screen pops** with customer and interaction history reduce handle time, speed issue resolution and enable faster call processing by providing agents with customer information at the time the customer interaction arrives.
