Integrate Cisco Contact Center with Siebel CRM, enabling multichannel interaction handling within the Siebel interface

b+s Connects for Siebel is a pre-packaged integration of Siebel CRM and Cisco’s Unified Contact Center solution. The software allows agents to do things like log in/log out, go ready/not ready with reason, answer, hang-up, transfer, and conference using Siebel’s Communications Panel.

Placing interaction control inside of Siebel—where customer data resides—gives agents a 360° customer view. It streamlines contact handling, provides quick access to agent tools, and improves efficiency, which means that agents won’t need constantly to spend time tabbing back and forth between applications when searching for information—time customers spend waiting.

b+s Connects for Siebel provides full CTI functionality to help drive efficiency, reduce costs, and ensure customer satisfaction. The solution pops customer information into the agent’s Siebel Web Client with calls, emails, or chats, facilitating lookup of customer information by phone number, email address, Caller Entered Digits (CED), etc. Agents can manage multichannel interactions from within the Siebel Communications Panel and the system logs all activities, both inbound and outbound for real time and historical reporting.

When it comes time to choose an integration technology for the contact center, business leaders demand a solution that is feature rich, simple to use, and cost effective. IT managers seek solutions that are easy to implement and simple to maintain. b+s Connects for Siebel is a pre-integrated package that is easy to install and offers the functionality demanded by today’s contact centers.
b+s Connects for Siebel

PRODUCT HIGHLIGHTS

→ Designed for multichannel contact centers
→ Pre-integrated solution provides rapid and reliable deployment and lowers implementation costs

KEY BENEFITS

• Seamless integration with the Siebel Communications Toolbar allows agents to handle customer interaction (voice, email and chat) without needing to switch between applications. This streamlines agent workflow and reduces training
• Unified media handling and universal queue enable centralized routing, reporting, scheduling etc. This improves productivity and simplifies administration
• Flexible screen pops with customer and interaction history reduce handle time, speed issue resolution and enable faster call processing by providing agents with customer information at the time the customer interaction arrives
• Channel blending is designed to leverage the presence of multichannel functionality
• Multi-chat allows agents to handle as many as six separate, simultaneous chats
